

Volumecontrol

SVC4

Thanks to the SVC4 it's possible to connect up to 8 loudspeakers (4 sets of two) to one amplifier (output). The SVC4 ensures that your amplifier does not undergo excessive load (neutralisation impedance problems with several loudspeakers). In addition the volume level can be regulated for each individual set of speakers making it possible to create 4 different volume zones. Thanks to its proportions, this model blends in perfectly with your own hi-fi installation. Available in black and silver-grey.

- distribution system with volume control
- for amplifiers up to 2 x 80 W
- 100 V : no
- 4 x stereo
- 8 ohms
- dimensions: (h x w x d)
45 x 210 x 150 mm
- black or silver-grey
